Canned ACL used when creating buckets and storing or copying objects.

This ACL is used for creating objects and if `bucket_acl` isn't set, for creating buckets too.

For more info visit <https://docs.aws.amazon.com/AmazonS3/latest/dev/acl-overview.html#canned-acl>

Note that this ACL is applied when server-side copying objects as S3 doesn't copy the ACL from the source but rather writes a fresh one. Enter a string value. Press Enter for the default (""). Choose a number from below, or type in your own value

```
1 / Owner gets FULL_CONTROL. No one else has access rights (default).
\ "private"
2 / Owner gets FULL_CONTROL. The AllUsers group gets READ access.
\ "public-read"
/ Owner gets FULL_CONTROL. The AllUsers group gets READ and WRITE access.
3 | Granting this on a bucket is generally not recommended.
\ "public-read-write"
4 / Owner gets FULL_CONTROL. The AuthenticatedUsers group gets READ access.
\ "authenticated-read"
/ Object owner gets FULL_CONTROL. Bucket owner gets READ access.
5 | If you specify this canned ACL when creating a bucket, Amazon S3 ignores
it.
\ "bucket-owner-read"
/ Both the object owner and the bucket owner get FULL_CONTROL over the object.
6 | If you specify this canned ACL when creating a bucket, Amazon S3 ignores
it.

### 3、验证配置是否正确

验证 AWS: `rclone ls awsremote:test001-ddw`

awsremote:配置文件 remote 名称

test001-ddw: AWS 对象存储桶名称

阿里首都在线: `rclone ls gicremote:demo-test`

### 4、执行数据迁移

```
rclone copyto awsremote:test001-ddw gicremote:demo-test
```
